Shower in Style

Lyvayko Freestanding Shower System is a unique one-step approach modular system that provides a leak-free unit with safe and easy installation. Our exclusive customized designs allow you to express individuality. One of the competitive advantages of the product is that it is assembled with thinnest and most durable walls in the industry (only 3/4" thick). As a result, our shower system takes less room but still provides 100% water resistance preventing leaks and mold issues. Our shower system gives the opportunity to EITHER step away from traditional room arrangements of installing units by the wall/ strictly into the corner OR follow the classic bathroom layouts.
